

Crabs

Crabs have a hard shell to keep them safe. Crabs have 8 legs and 2 pincers. The male crab has 1 larger pincer. The name for the group of crabs is a cast. Crabs communicate with each other by drumming or waving their pincers. Crabs have eyes on top of their antennae. Crabs are omnivores but they feed mainly on algae, other crustaceans, worms, and fungi.

Here is a group of crabs making burrows at the beach.
